Design System Tokens

Palettes, typography, spacing — Figma-ready

INTERNAL DOCUMENT

2026-05-15

A token reference for the Figma board. Every value here is final-enough to paste into a Figma variable or style. Treat the palettes as **candidates to compare**, not as a committed pick.

This document is paired with the strategic [design brief](#). The brief tells you *why*; this document tells you *what hex code*.

The accompanying palette board is at [diagrams/palette-board.svg](#) — drag that into Figma as a reference image while you build the variables.

Palettes

Three directional candidates. Each carries a different brand promise. They all share the same structural tokens (background, foreground, accent, success, danger) so the design system stays consistent regardless of which one wins.

Palette A — Warm Premium (research direction)

Aligns with the partner's market-research direction (ivory / champagne / mocha / soft black). Reads as calm, feminine, premium.

Token	Hex	HSL	Role
background	#F8F4EC	36 33% 95%	Page background (warm ivory)
surface	#FFFFFF	0 0% 100%	Cards, sheets
surface-muted	#EFE8DA	38 28% 90%	Subtle fills
foreground	#1F1A14	30 18% 10%	Primary text (soft black)
foreground-muted	#6A5F50	30 14% 37%	Secondary text (mocha)
border	#E4DBC8	40 28% 84%	Hairlines
accent	#C9A86A	38 47% 60%	CTA accent (champagne)
accent-foreground	#1F1A14	30 18% 10%	Text on accent
success	#5E7A4E	100 22% 39%	Subtle olive
danger	#A8443A	5 49% 44%	Muted terracotta-red

Palette B — Cool Neutral (current scaffold default)

The shadcn/ui "zinc" baseline. Reads as modern, neutral, tool-like. Useful as a control.

Token	Hex	HSL	Role
background	#FFFFFF	0 0% 100%	Page background
surface	#FFFFFF	0 0% 100%	Cards
surface-muted	#F4F4F5	240 5% 96%	Subtle fills
foreground	#09090B	240 10% 4%	Primary text
foreground-muted	#71717A	240 4% 46%	Secondary text
border	#E4E4E7	240 6% 90%	Hairlines
accent	#18181B	240 6% 10%	CTA accent (matches primary)
accent-foreground	#FAFAFA	0 0% 98%	Text on accent
success	#16A34A	142 76% 36%	—
danger	#DC2626	0 84% 51%	—

Palette C — Soft Black Luxury

Dark variant of the warm-premium direction. Editorial, dramatic, high-fashion. The natural dark-mode partner for Palette A.

Token	Hex	HSL	Role
background	#1A1614	20 13% 9%	Page background (soft black, warm cast)
surface	#26201D	20 14% 13%	Cards
surface-muted	#332B27	20 14% 17%	Subtle fills
foreground	#F4ECDD	40 47% 91%	Primary text (warm cream)
foreground-muted	#A89D8A	38 16% 60%	Secondary text
border	#3D332D	20 14% 21%	Hairlines
accent	#D9B677	36 56% 66%	CTA accent (lighter champagne)
accent-foreground	#1A1614	20 13% 9%	Text on accent
success	#7FA070	100 20% 53%	Soft olive
danger	#C77268	8 47% 59%	Soft terracotta

Typography

Two candidate pairings. The pairing must be picked **before** Figma component work; everything that follows is opinionated by the typeface choice.

Pairing 1 — Inter for everything

Modern, neutral, exceptional screen rendering, free.

- **Display & headings:** Inter, weights 600–700, tight letter-spacing (`-0.02em` for the largest, `-0.01em` for h2)
- **Body:** Inter, weight 400, line-height 1.55
- **Monospace:** Geist Mono (for "known for" tags, codes, technical UI)

Pairing 2 — Fraunces + Inter

Editorial serif headlines on a clean sans body. Matches the "premium, feminine, aesthetic" tone of the research.

- **Display & headings:** Fraunces, weight 400 italic for hero headlines (light + cursive), weight 600 for h2 (substantial), `-0.02em`
- **Body:** Inter, weight 400, line-height 1.55
- **Monospace:** Geist Mono

Pairing 2 is the **bolder** choice and the better match for the beauty-services direction. Pairing 1 is the **safer** choice — better for an SEO-driven launch where the typeface needs to render consistently across every device.

Scale (both pairings)

Token	Size	Line height	Role
<code>display-xl</code>	64 / 72 px	1.05	Hero
<code>display-lg</code>	48 / 56 px	1.10	Section opener
<code>display-md</code>	36 / 40 px	1.15	Page title
<code>h1</code>	28 px	1.20	—
<code>h2</code>	22 px	1.25	—
<code>h3</code>	18 px	1.30	—
<code>body-lg</code>	18 px	1.55	Hero subhead
<code>body</code>	16 px	1.55	—
<code>body-sm</code>	14 px	1.50	Captions, meta
<code>mono-sm</code>	12 px	1.40	Tags, eyebrows

Larger sizes scale up at the `md` breakpoint and above.

Spacing scale

Tailwind defaults with explicit favourites. No magic spacing values.

Token	Value (rem)	Pixels	Use
<code>space-1</code>	0.25	4	Tight gaps
<code>space-2</code>	0.5	8	—
<code>space-3</code>	0.75	12	—
<code>space-4</code>	1	16	Default gap
<code>space-6</code>	1.5	24	Section padding
<code>space-8</code>	2	32	—
<code>space-12</code>	3	48	Hero sections
<code>space-16</code>	4	64	Major separators
<code>space-24</code>	6	96	Above-the-fold breathing room

Border radius

Token	Value	Use
<code>radius-sm</code>	4 px	Pills, tags
<code>radius-md</code>	8 px	Inputs, buttons
<code>radius-lg</code>	12 px	Cards
<code>radius-xl</code>	16 px	Feature cards, modals
<code>radius-pill</code>	9999 px	Avatars, badges

Component variants

Worth drawing in Figma so the design system is concrete.

Button

- **Primary** — solid accent background, accent-foreground text
- **Secondary** — outlined, foreground border, foreground text
- **Ghost** — no border, no fill, foreground text on hover-fill
- **Destructive** — solid danger background, white text

- **Link** — underline on hover, accent colour

States: default, hover, focused (with visible ring), disabled, loading (spinner).

Input

- **Default** — surface background, border hairline, foreground text
- **Focused** — accent border, subtle ring
- **Error** — danger border, danger helper text below
- **Disabled** — surface-muted background, 50% opacity

Card (Listing card)

- **Default** — surface background, radius-lg, border, image at top
- **Featured** — accent border or subtle accent-tinted background (for "Featured Artist")
- **Hover** — lift (shadow), no scale (scale is too playful for this brand)

Avatar

- Always rounded (`radius-pill`)
- Trust-tier badge slot at the bottom-right, with palette accent

Aesthetic tag (chip)

For the "Soft Glam Artists", "Luxury Hair" style categories. Should feel curated, not gamified.

- **Default** — surface-muted background, foreground-muted text, `radius-pill`, mono font (small)
- **Active** — accent background, accent-foreground text
- **Hover** — subtle border accent

Accessibility targets

- Contrast: $\geq 4.5:1$ body text, $\geq 3:1$ large text. Verify Palettes A and C against WCAG 2.1 AA.
- Focus rings must be visible on every interactive element. Never `outline: none` without a replacement.
- Form labels always present; placeholders are not labels.
- Reduced-motion media query honoured.
- All icons used for meaning have `aria-label` or accompanying text.

Notes for the Figma board

- Build palettes as Figma **variables** (not styles), one collection per palette. Then swap collections to instantly re-skin every frame. This is the cleanest way to A/B the three palettes without duplicating frames.
- Drop the [palette-board.svg](#) onto the canvas as a reference image while you set up variables — saves typing every hex.
- Set up text styles for each typography token (`display-xl` , `body` , etc.). Use the same names as this document so future "make this text body-lg" instructions translate cleanly.
- The three palettes share the **same token names** — so a button styled with `bg-accent text-accent-foreground` works correctly under all three.
- The strategic brief stays at [design-brief.md](#) — voice, tone, what the brand should *feel* like. Use this document for the *what*, the brief for the *why*.
